It's never explicitly stated, but we can fill in the blanks. According to Seamus, his name was not a choice he made - it was the result of a twisted biological experiment, meant to produce the perfect hero. So he initially became Seamus. Then his world changed, and Seamus became the tainted hero he hated. Later, something else went wrong with the experiment, and Seamus's name changed to something else entirely (I won't ruin it for you). Floyd-Steinberg dithering is used in the Microsoft Windows Compatible bitmap and Device Independent bitmap formats. It is an error-prone dithering algorithm that delivers the best results in terms of quality and speed. True Colour dithering is used for True Colour formats. It is a fast but less-accurate dithering algorithm. It is recommended for 24-bit bitmaps. You can choose another suitable algorithm (ICD, 8BPP, 4BPP) from a dropdown list. When you click Next, the wizard will create the icon image in its own temporary folder. A preview of the icon will appear in the Icon Preview pane. You can modify the icon file settings, and then click Finish to save the icon image. If you create a mask (alpha channel), it will be automatically created and attached to the icon image. A new icon will appear in the Icon Preview pane, showing the transparent areas of the icon. b7e8fdf5c8
